"Isolation of Large Inframicrobes During the Influenza Epidemic 1962."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 2, 1963;
pp 197-201.

Abstract [English summary modified]: From 171 specimens (including 110 nasopharyngeal smears, 48 of urine) of influenza patients during the 1962 epidemic, 6 influenza virus strains were isolated but only when incubating at 35 rather than 37 centigrade. Also 10 larger, rickettsia-like agents (cell size 200 to 400 microns) Speculative discussion as to significance; considered probable. Three photomicrographs; 10 Rumanian (incl. thesis) and 3 Western references.

Host Cells. Part 2. Properties of Viruses Isolated from Tumor Inoculated
in vivo with Adenovirus Type 3."

Bucharest, Studii si cercetari de inframicrobiologie, Vol 14, No 3, 1963;
pp 295-304.

Abstract [English summary modified]: Inoculation of adenovirus type 3
into Ehrlich ascites tumor in mice did not affect tumor development,
but from inoculated tumors 2 types of cytopathogenic agents could be
isolated, neither identical with either Ehrlich ascites or later
inoculum; antigenicity of 1 was double (neutralized by adenov.3 & by
Ehrlich) while the other was neutralized only by adenov. 3; but tumor
induced by each was morphologically original. Neither agglutinated
mice RBC nor those of rat, rabbit, hen, hamster. Nine photomicrographs;
4 Western and 7 Rumanian references.

"Virus-Host Cell Relationship in the Course of Infection of Ehrlich Ascites Tumor with Different Viruses. III. Infectivity of Deoxyribonucleic Acid Extracted From the Cytopathic Agents Isolated from the Tumor After Inoculation In Situ of Adenovirus Type III."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 4, 1963, pp 447-456.

Abstract [Authors' English summary modified]: Phenol-extracted DNA from 2 strains of type 3 adenovirus cultivated in mice with Ehrlich ascites carcinoma was inoculated into cultures of human embryo cells. A cytopathic effect characteristic for the virus was observed; this effect was suppressed when the extracts were incubated before inoculation with deoxyribonuclease. Seroneutralization tests showed that the viruses generated after DNA inoculation are antigenically similar to the viruses from which the extraction was done. The results show that the properties acquired by the new virus strains are maintained in the viruses generated after inoculation into the sensitive cell of the respective nucleic acid.

TITLE: The Relations Between the Velocities of Simultaneous
Vertical Motions of the Earth's Crust, the Gravitational
Fields, and the Elements of the Earth's Structure ✓

PERIODICAL: Doklady Akademii nauk SSSR, 1960, Vol. 132, No. 4, pp. 810-813

TEXT: In the introduction, the direct and indirect correlation between the time-dependent changes of the gravitational field and the vertical motion of the Earth's crust are discussed, and two symbolic relations for this purpose are given. In the geophysical laboratory of the Kompleksnaya yuzhnaya geologicheskaya ekspeditsiya Akademii nauk SSSR (Geological Expedition to the South for Comprehensive Studies of the Academy of Sciences, USSR), which was under the supervision of A. T. Donabedov, systematic investigations were carried out in 1957 of the indirect relations between the gravitational fields and the vertical motions of the Earth's crust. At the same time, the characteristic ✓B

B014/B007

features of the structural elements of the Earth's crust were investigated. From data, which were determined in the territory of the Caspian Sea, relations between the gravitational anomalies and the vertical motions were found to exist. Three main types of relations, viz. a so-called direct, an inverse, and an indefinite relation, were discussed. From the diagrams of these measurements (Figs. 2-3) for the profiles Rostov - Sal'sk (Fig. 2) and Stalingrad - Krasnodar (Fig. 3) carried out in consideration of other profiles, several conclusions are drawn and discussed in detail. There are 3 figures and 1 Soviet reference. ✓B

Title : Hemicellulose Produced by the Neutral Sulfite Process
from Extracted Wood Chips.

Orig Pub: Glasnik Khem. drysht., 1956, 21, No 5, 309-320.

Abstract: Dry and moist chips were cooked by the neutral sulfite process in a rotating autoclave. The concentrations of sodium sulfite and sodium bicarbonate in the cooking liquor were varied in the ranges 8-48% and 3-12% respectively, expressed as a percent of the weight of dry wood;

Abs Jour: Ref Zhur-Khimiya, No 1, 1953, 3273.

the time of cooking was 2.5-5 hours at 165-170°C, the yield was 61-74.5%. The strongest hemicellulose was produced at high concentrations of the chemical reagents. Hemicellulose produced by the use of a cooking liquor containing 20-32% of sodium sulfite and 6% of sodium bicarbonate was used for producing corrugated cardboard.
